FEED BACK FOR User End Bioinformatics COURSE!

Summary of feedback from a scientist, who attended our one-week program on 'User- End Bioinformatics':

"Hearty thanks to such an informative program. The course helped me a lot to understand many concepts more clearly. The different practice sessions were helpful to learn 'how and when to use different tools in real scientific problems' The presentations were really informative and gave a very clear understanding about concepts, which are little difficult to learn otherwise!"

This scientist is from computational background and wanted to do research on a bioinformatics issue. She rated the instructors and speakers at 9 on an average, (when requested to rate them on a 1 to 10 scale, 1 being worst and 10 being the best).]

For my PhD work on "Metagenomic study of large intestinal flora in South Indian population", I needed urgent training in bioinformatics components. I am glad that 'Shodhaka' provided an excellent timely help through a week's training in user-end bioinformatics October 2009. I learned all required basics in bioinformatics for my research. The instructors have trained me from the very basics and I am now able to analyze my experimental results. I was allowed to use a separate computer for my learning purpose and practice for long hours. The value of the skills developed was much more than the cost involved. The instructors and the scientist involved in the training were highly skilled and knowledgeable. They always showed enthusiasm to clear all my doubts. I must thank 'SHODHAKA' for making me capable of a better and efficient research work. I wish the best for SHODHAKA team.

B.Sandya Rani,
PhD student,
Gastrointestinal Sciences Department, Christian medical college,
Vellore.
